

Academic Integrity Declaration

Course: EF234405 — Design & Analysis of Algorithms **Assessment:** Final Exam (Group Capstone Project) — “*Design It, Prove It, Build It, Measure It*” **Project:** ReelPath — Critical-Path Analyzer for Video Production Schedules **Public repository:** <https://github.com/milhan-z/draftpaa>

Pledge

We, the undersigned, declare that this submission — the report, the source code in the repository linked above, and all accompanying materials — is our own original work. We pledge that:

- We did not plagiarise any part of this work from another person, group, book, website, or generative tool, and every external library, code snippet, dataset, and idea we relied on is explicitly cited in the report and the README.
- The two algorithms at the core of the project (the topological-sort / DAG longest-path algorithm and the Bellman–Ford baseline) were implemented by us from first principles; no library shortest-path, longest-path, or topological-sort routine was used as our implementation.
- All experimental results reported are real, measured values produced by running our own benchmark, with the random seeds fixed and reported for reproducibility.
- We understand that confirmed academic dishonesty results in a grade of zero and is handled under the course’s academic-honesty policy.

TEMPLATE NOTICE (remove before signing): Verify this pledge wording against the exact text in the official exam brief ([ketentuan.pdf](#) , §5 *Plagiarism & Academic Honesty Policy*) and replace it with the official wording if it differs. The signature may be handwritten or digital, but it **must** be added by each member personally — do not type a name in place of a signature.

Signatures

_____, _____ (City, e.g., Surabaya) (Date, e.g., 18 June 2026)____

Member 1

Signature: _____

Full Name: _____

Student ID: ____ (e.g., 5025221xxx)____

Member 2 (remove this block if not applicable)

Signature: _____

Full Name: _____

Student ID: _____

Member 3 *(remove this block if not applicable)*

Signature: _____

Full Name: _____

Student ID: _____

Contribution Declaration

To ensure fairness, each member’s percentage of contribution and specific role is stated below. *(This project was completed by a solo author; adjust the table to reflect your real team composition before submitting.)*

Member	%	Role / Contribution
<i>[Full Name — Student ID]</i>	100%	Model & architecture; both algorithms (core + baseline); proof & complexity analysis; demo; benchmark harness; report.

If submitting as a team of two or three, split the percentage and roles honestly (they must sum to 100%). Example from the brief: *Indah — 34%: model + core algorithm + proof; Turangga — 33%: baseline + demo + benchmark; Muliawati — 33%: complexity analysis, evaluation, plots, report.*
